Cervical Radiculopathy - Clinical Application of Traction and Exercises

1.	What is	s the	most	common	age	group	for	\mathbf{CR}	to	occur	?
----	---------	-------	------	--------	-----	-------	-----	---------------	----	-------	---

- A. 20s
- B. 30s
- C. 70s
- D. 50s

2. What is a cause of CR?

- A. Migraine
- B. Spinal nerve compression
- C. Osteoporsis
- D. Spinal stability

3. What is not a sign of CR?

- A. Headache
- B. Numbness in hand
- C. Pain in mid-back
- D. Aching in cervical spine

4. What is the most common symptom of CR?

- A. Arm pain
- B. Sensation deficit
- C. Reflex deficit
- D. Weakness

5. Which is not a prognostic factor for developing CR?

- A. Other musculoskeletal disorders
- B. Passive coping strategy
- C. Having an office job
- D. Psychological distress

6. Where will C5 radiculopathy produce referral pain?
A. Neck B. Fingers C. Low back D. Occiput
7. Where would expected weakness occur with a C7 radiculopathy?
A. Hypothenar muscles B. Biceps brachii C. Wrist flexors D. Wrist extensors
8. Which is not a diagnostic strategy for CR?
A. Xray B. MRI C. CT D. Nerve conduction study
9. What percentage of the population with or without symptoms have evidence of cervical spine degeneration?
A. 80% B. 20% C. 50% D. 70%
10. Which imaging study is most effective for diagnosis of CR?
A. MRI B. CT myelography C. NCS D. EMG
11. What pathology is CT myelography most useful in detecting?
A. Cervical radiculopathy B. Spinal pathology C. Spinal nerve impingement D. Infection

12. What contributes to complex CR?A. AbscessB. Pain in thumbC. Sensation loss in lateral forearm

13. What will an EMG study reveal?

D. No improvement in one week

- A. Sensation deficits
- B. Weakness in myotome pattern
- C. Pain in upper extremity
- D. Weakness in lower extremity

14. Which is not a standard part of a physical therapy assessment for CR?

- A. Posture
- B. Thoracic mobility
- C. Abodominal strength
- D. ROM in upper extremities

15. How many degrees should the cervical spine flex normally?

- A. 20 degrees
- B. 40 degrees
- C. 60 degrees
- D. 80 degrees

16. What spinal segments allow most of the rotation of the cervical spine?

- A. C4-5
- B. C2-3
- C. C1-2
- D. C6-7

17. What can a clinician expect if a patient has active shoulder flexion to 60 but passive to 170 degrees?

- A. Joint restriction
- B. Muscle length issue
- C. Neoplasm
- D. Thoracic outlet syndrome

18. Which dermatome is affected with parasthesia in the upper clavicle?					
A. C3					
B. C5					
C. C2					
D. C4					
19. The tendon of which muscle should be tested for deep tendon reflex to examin C6 nerve root?					
A. Flexor pollicus longus					
B. Brachioradialis					
C. Triceps brachii					
D. Anterior deltoid					
20. What does the Spurling's test detect?					
A. Nerve root compression					
B. Migraine					
C. Thoracic outlet syndrome					
D. Decreased thoracic extension					
21. What is not a test part of the CPR for cervical radiculopathy?					
A. Distraction					
B. Spurling's					
C. Rotation more than 60 degrees					
D. ULTTa					
22. What should a clinician examine if suspecting cervical myelopathy?					
A. Blood flow to cervical spine					
B. Babinski reflex					
C. Nerve conduction study					
D. Lower extremity strength					
23. What is a common pathology causing CR?					
A. Tumor					
B. Infection					
C. Disc herniation					
D. Trauma					

24. What is the most common operation for CR?

- A. Anterior cervical discectomy and fusion
- B. Cervical disc replacment
- C. Minimally invasive posterior cervical foraminotomy
- D. Laminectomy

25. When is a cervical collar most useful?

- A. 1 year after injury
- B. 4 days after pain began
- C. For mild pain
- D. One month after pain

26. Which medication is not supported in management of CR?

- A. NSAID
- B. Epidural steroid
- C. Opioid
- D. Tricyclic antidepressant

27. Which type of traction is most supported in literature for longer lasting treatment of CR?

- A. Mechanical
- B. Over the door
- C. Prone
- D. Manual

28. When combined with other interventions which treatment is proven most effective for CR?

- A. Manipulation
- B. Steroid injection
- C. Surgery
- D. Exercise

29. Which muscles are important to strengthen when treating CR?

- A. Latissimus dorsi
- B. Deep neck flexors
- C. Pectoralis major
- D. Levator scapulae

30. Which outcome measure should be used to capture neck pain and disability?

- A. ODI
- B. NPRS
- C. NDI
- D. DASH
